

Room Profile

Training Room

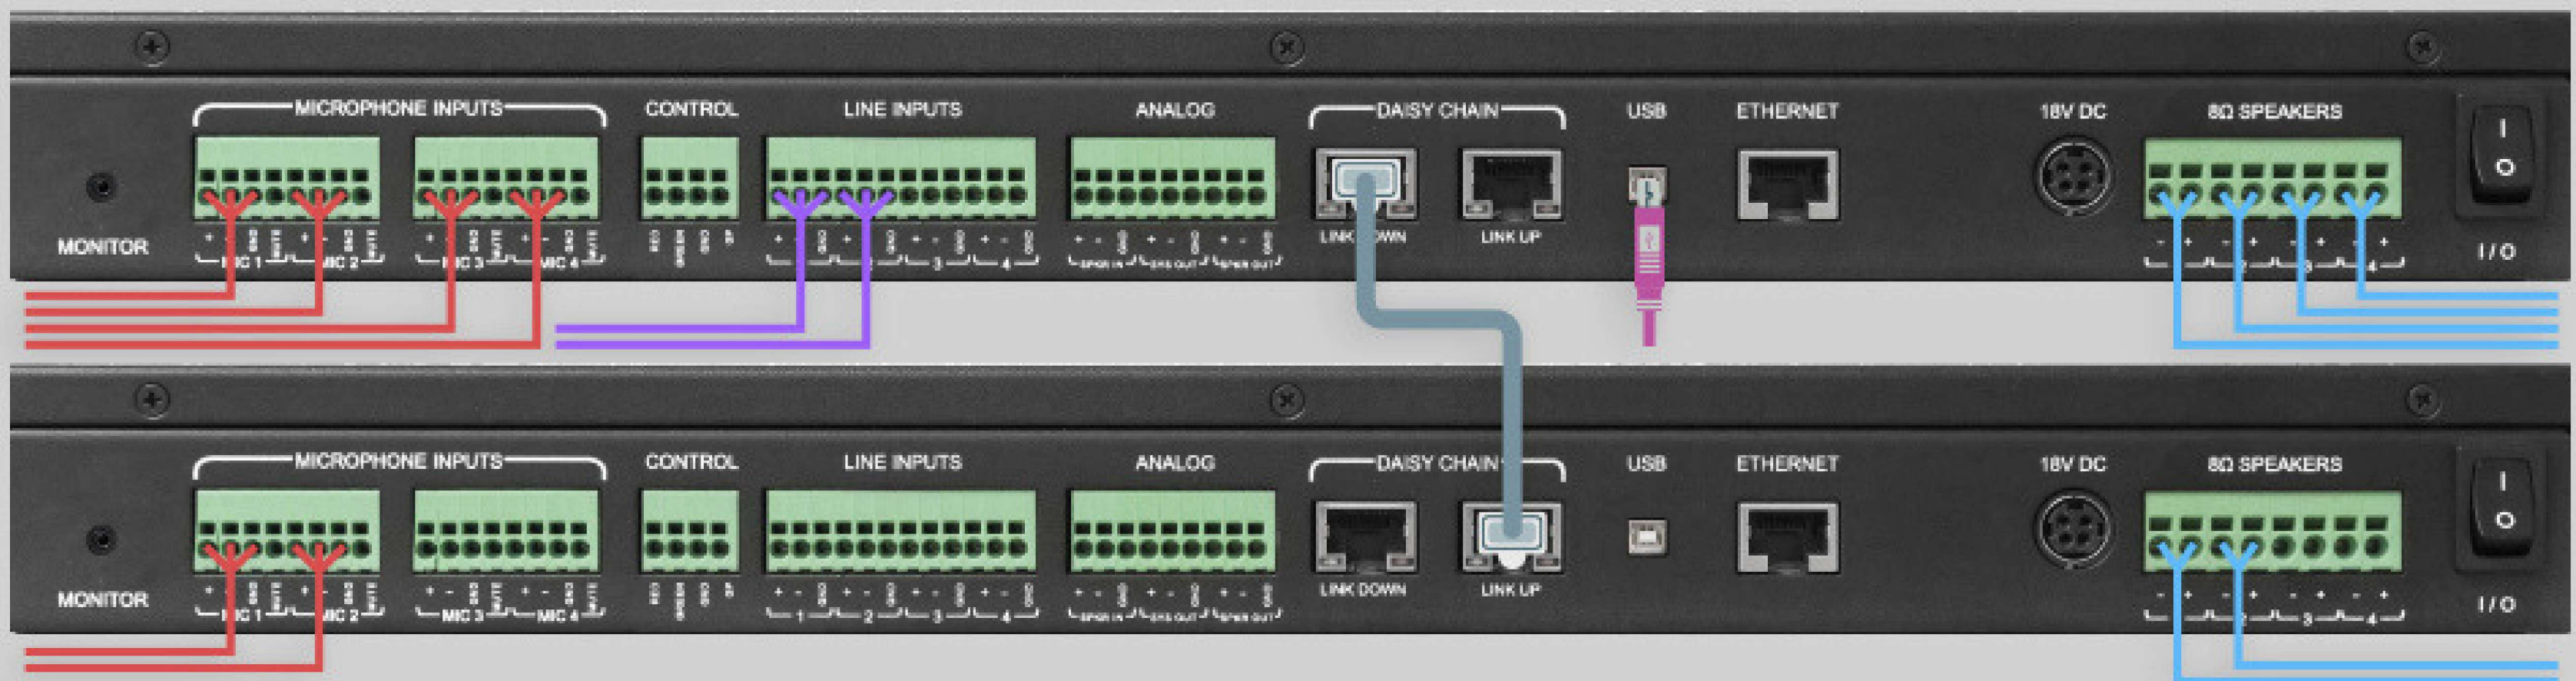

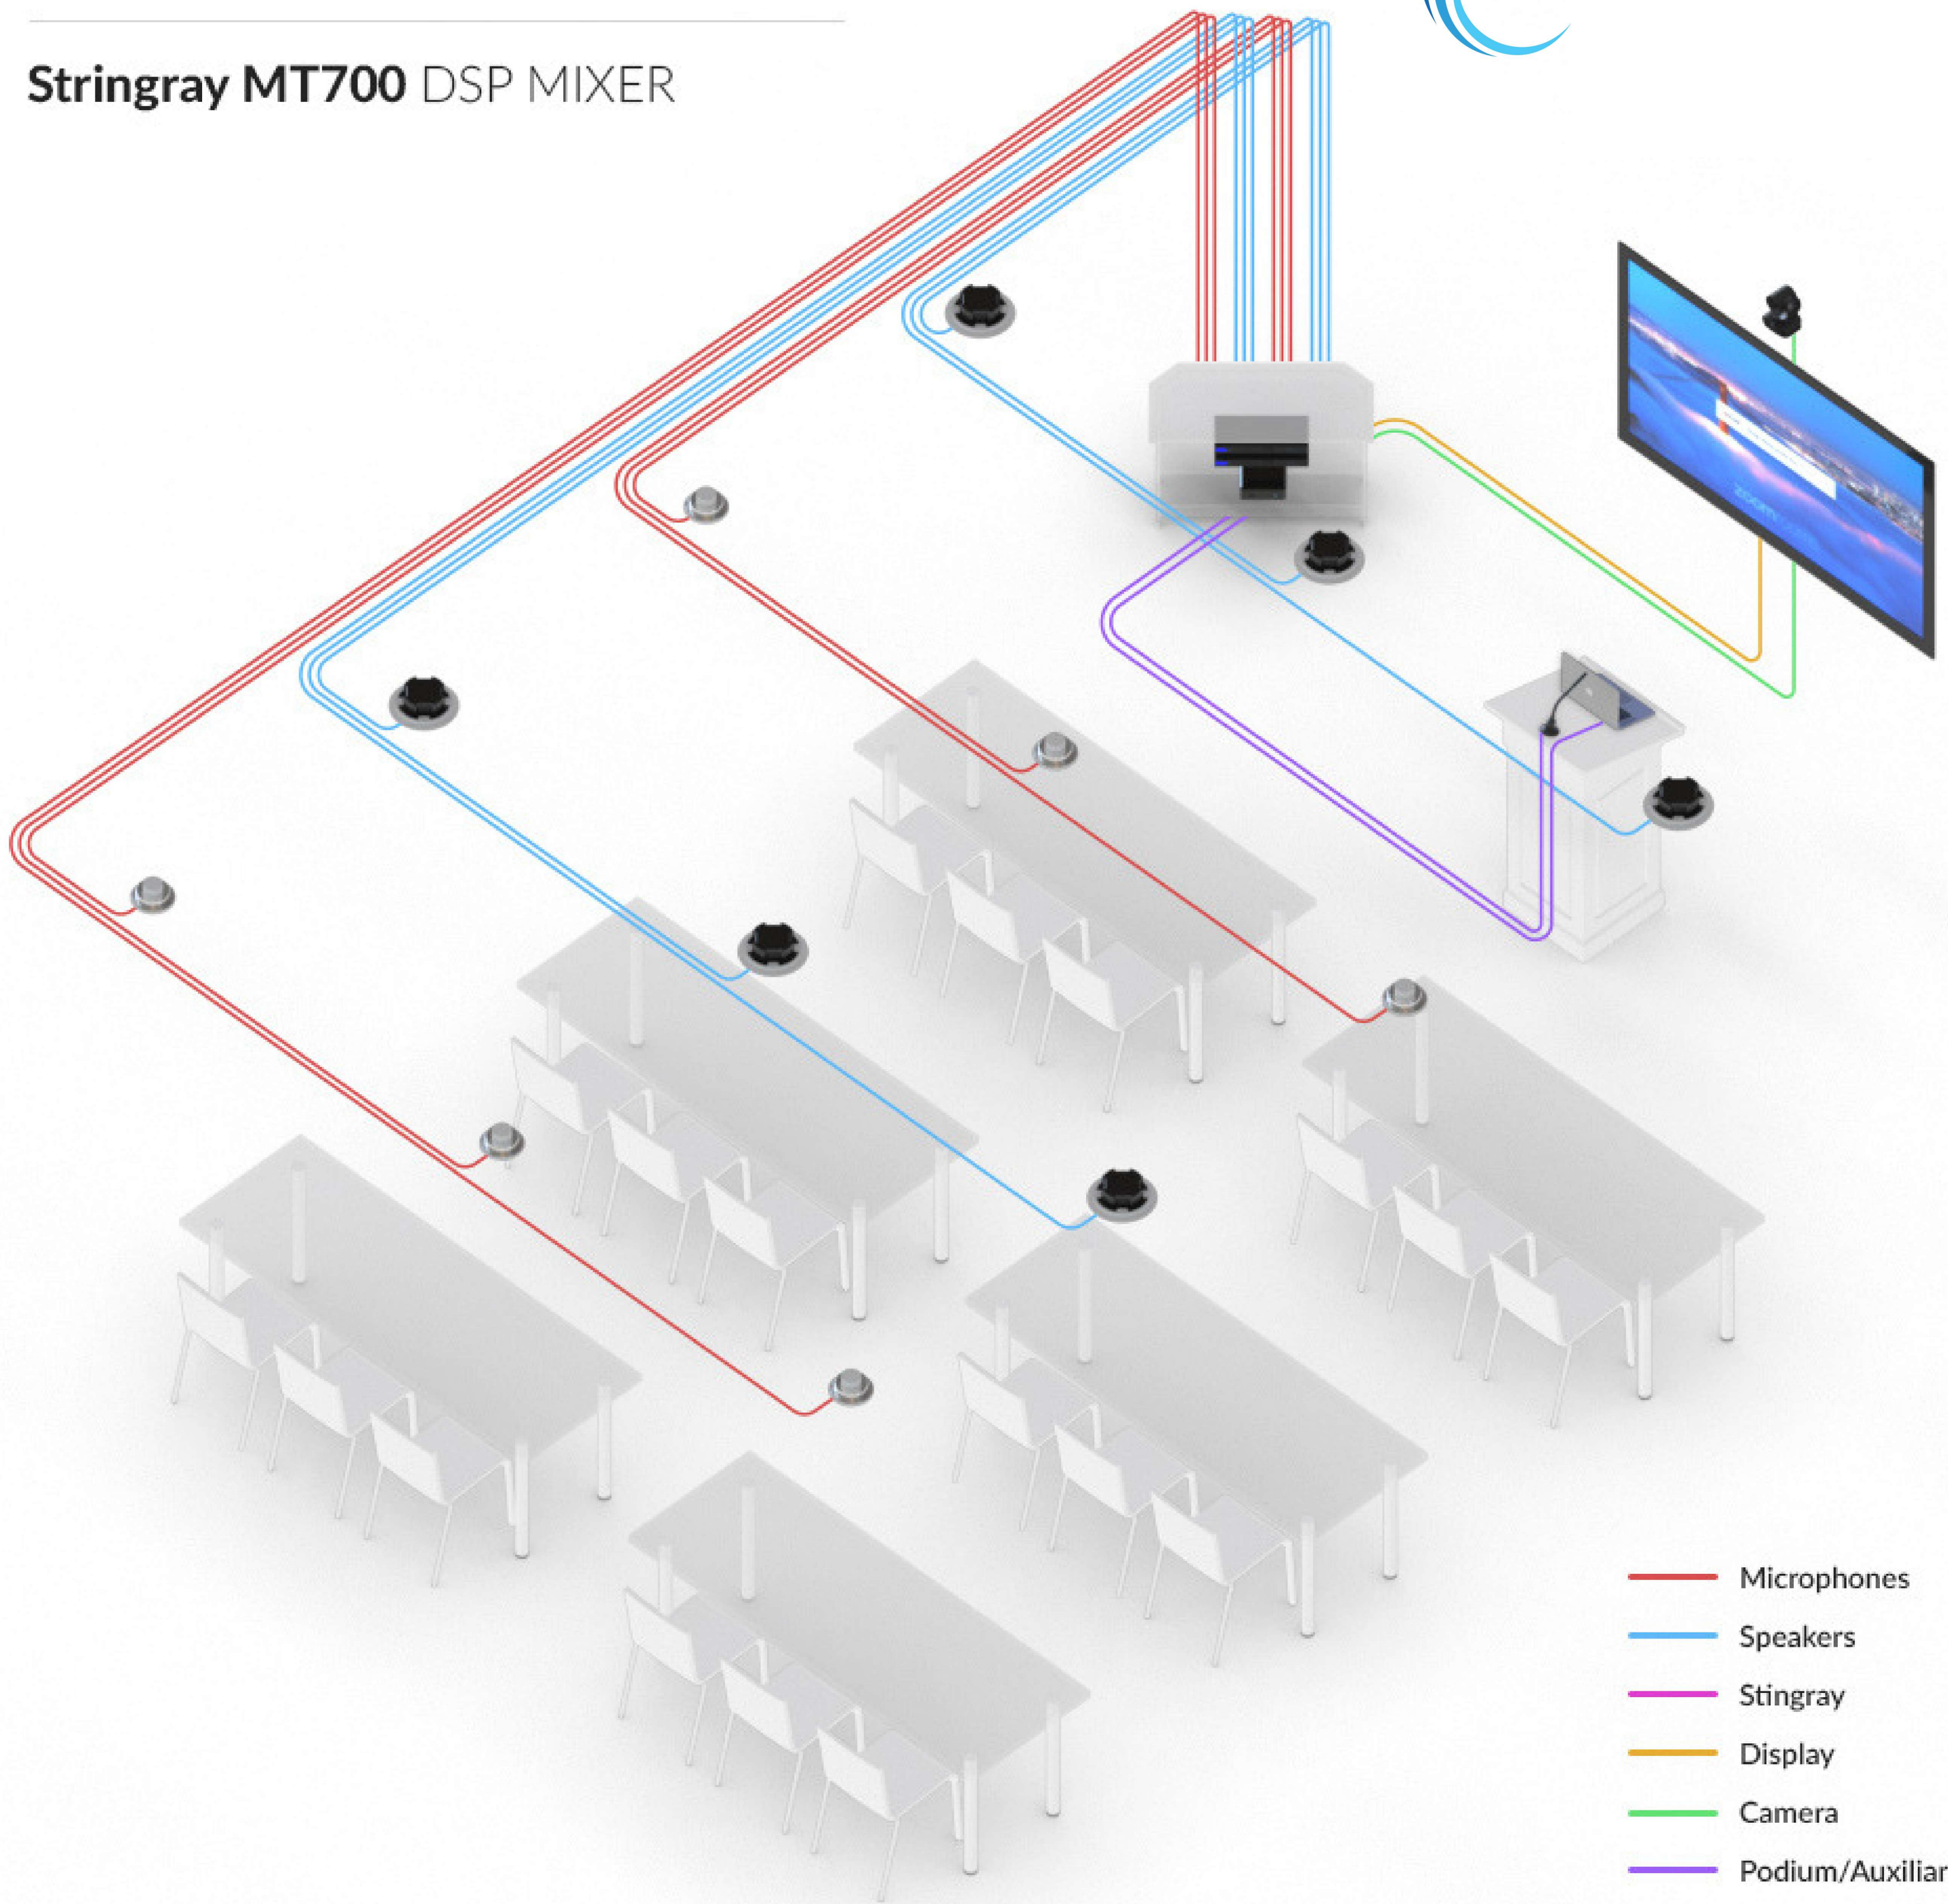

Training Rooms can also be recognized as classrooms. Rows of desks are lined up facing one direction with a monitor and podium or desk at the front of the room. Devices like the **Stingray DSP Mixer** allow for the functionality of the room to remain intact, no matter the configuration. Another option is ceiling mounting our **Smart Spider Speakerphones** that can be daisy-chained for scalable coverage.

In the following renderings, we created a room that seats 18 people. The first diagram utilizes two Stingray DSP Mixers and this room requires six microphones in the ceiling, as well as one microphone for the speaker at the podium paired with six ceiling-mounted speakers.

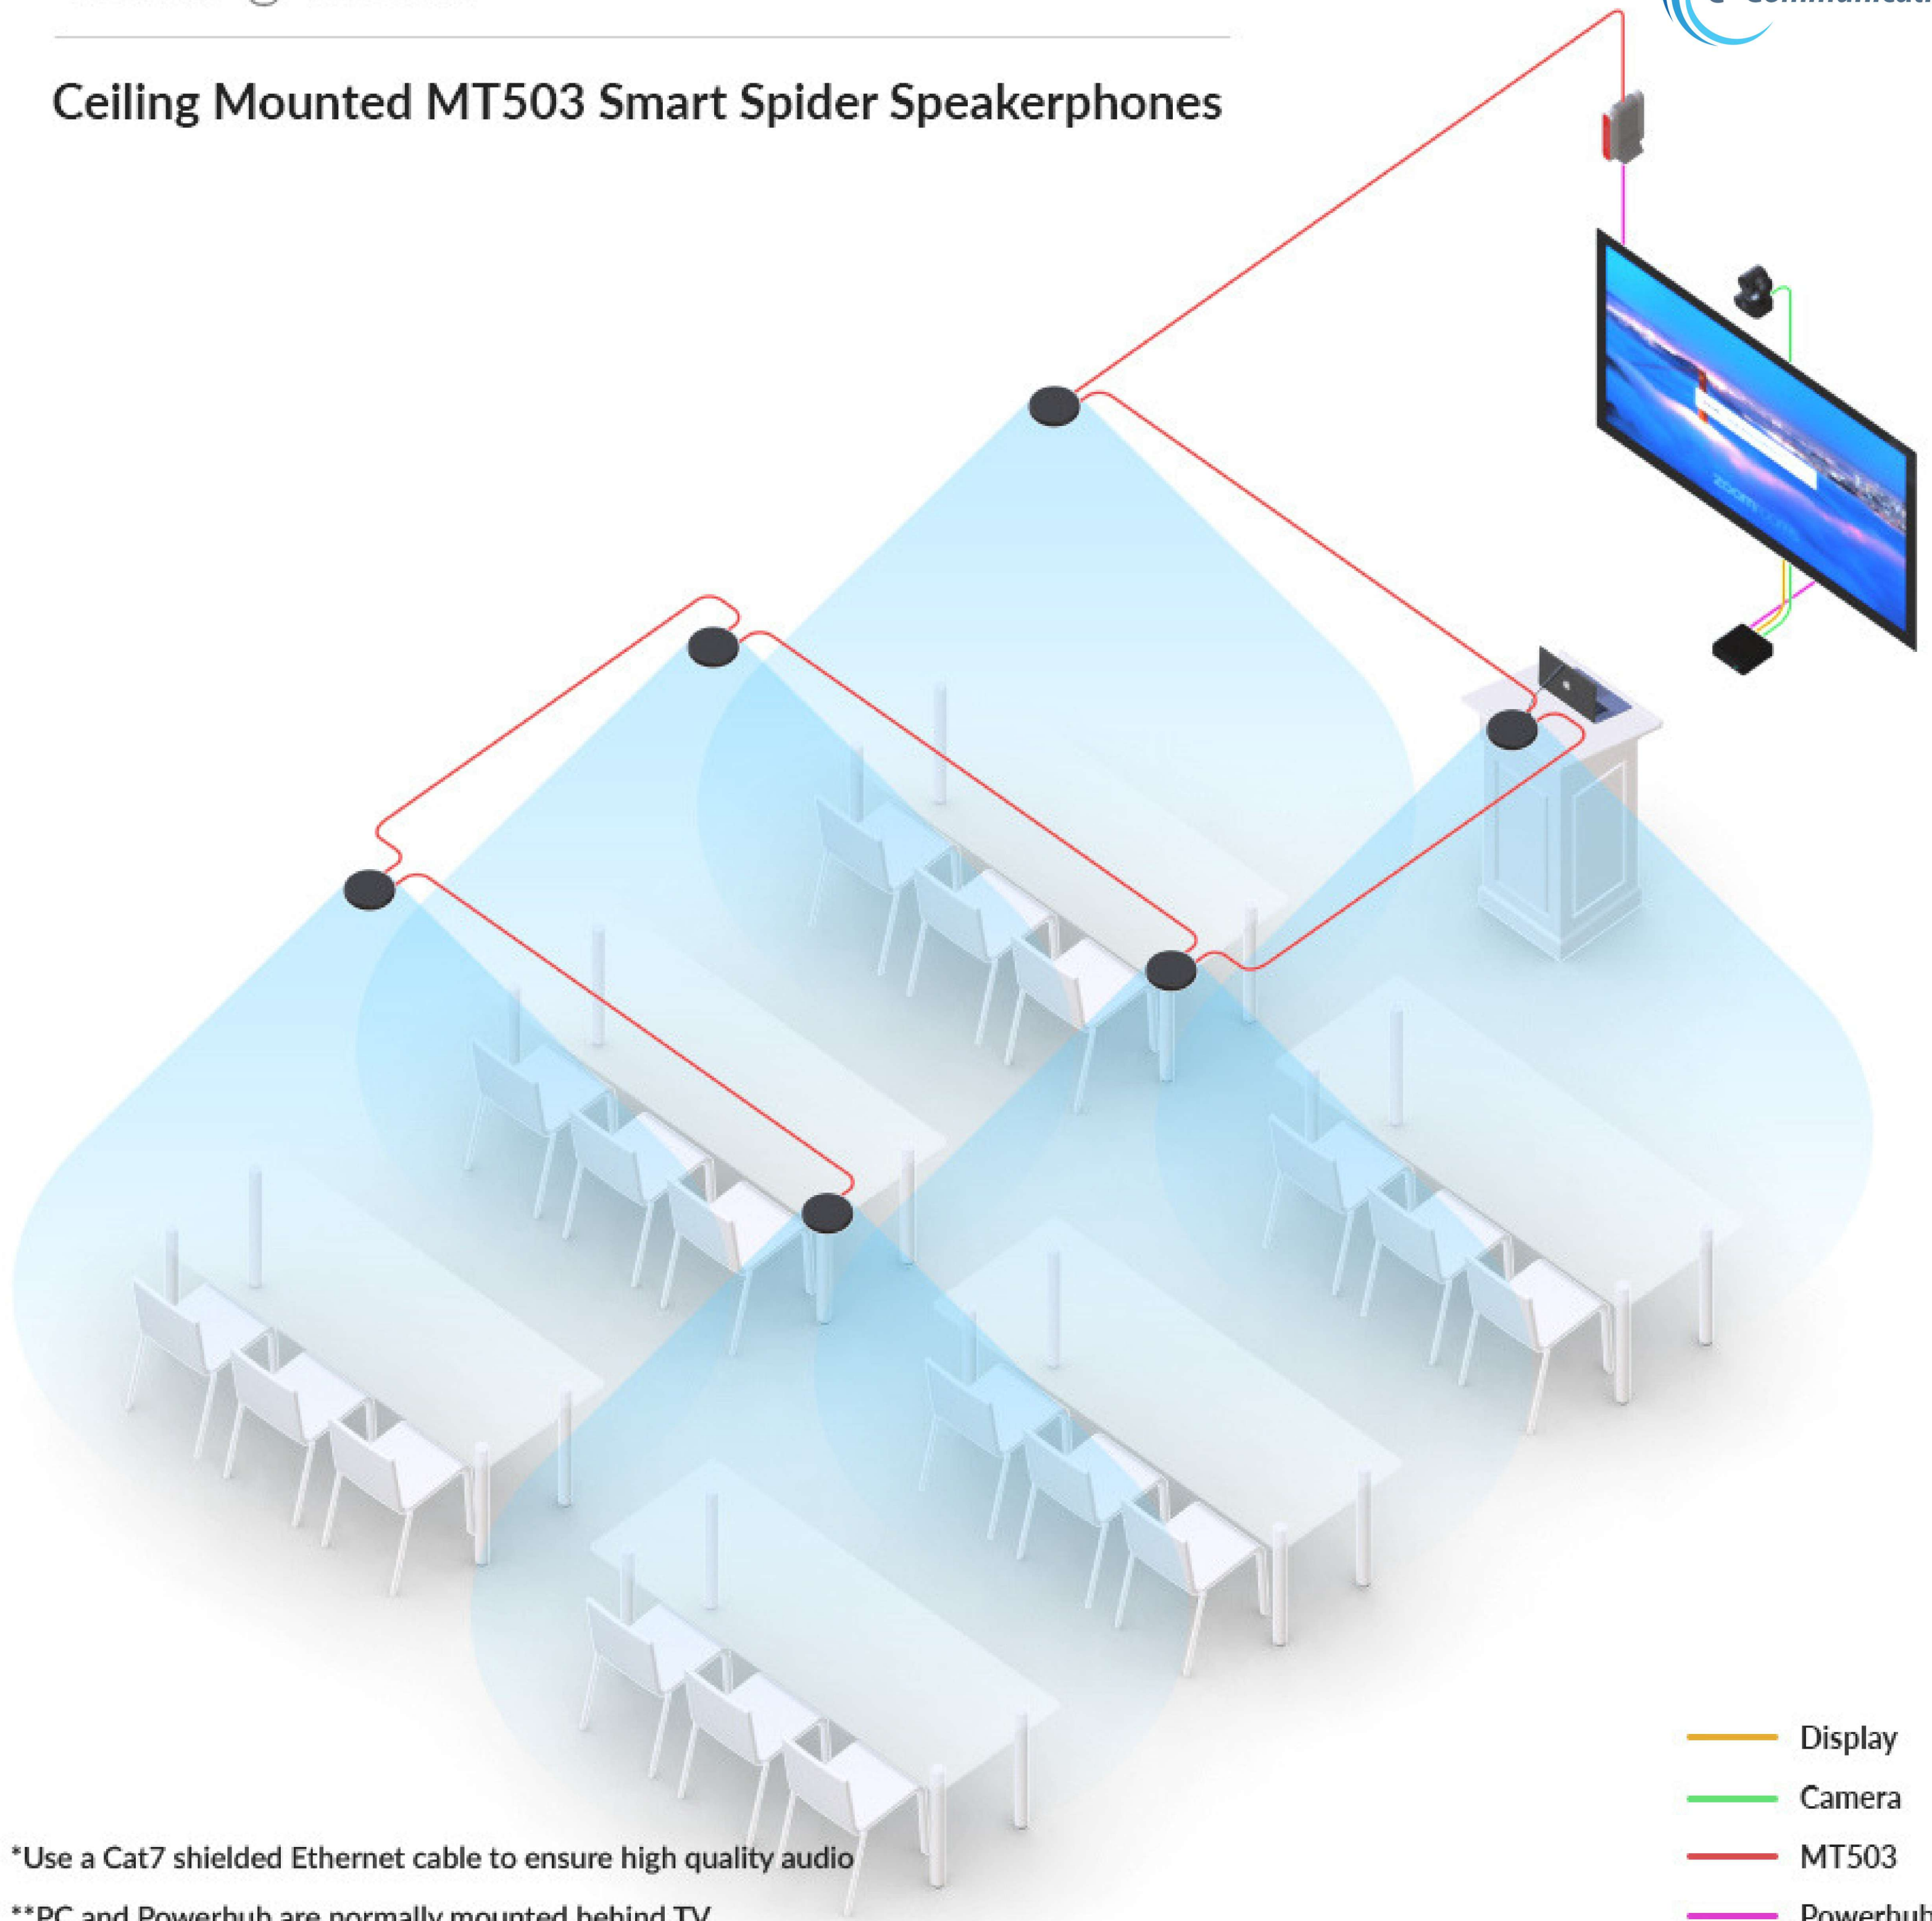

In the second diagram we chose to ceiling mount and daisy-chain our Smart Spider Speakerphones. This has become a popular install because it is scalable and a more cost effective option, making it perfect for classrooms that utilize distance learning.

Training Room Configuration

Stringray MT700 DSP MIXER

Ceiling Mounted MT503 Smart Spider Speakerphones

*Use a Cat7 shielded Ethernet cable to ensure high quality audio

**PC and Powerhub are normally mounted behind TV
